

Monster Squeeze Game

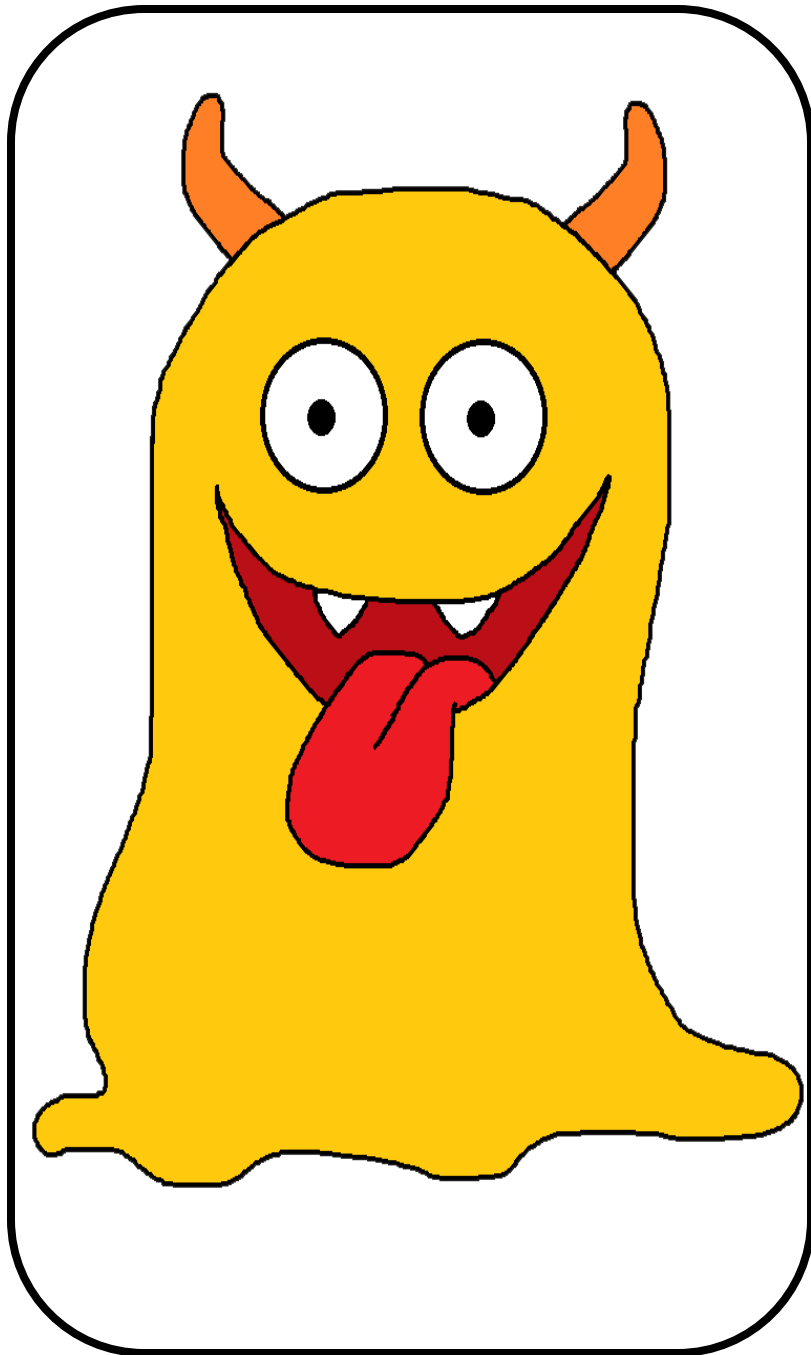

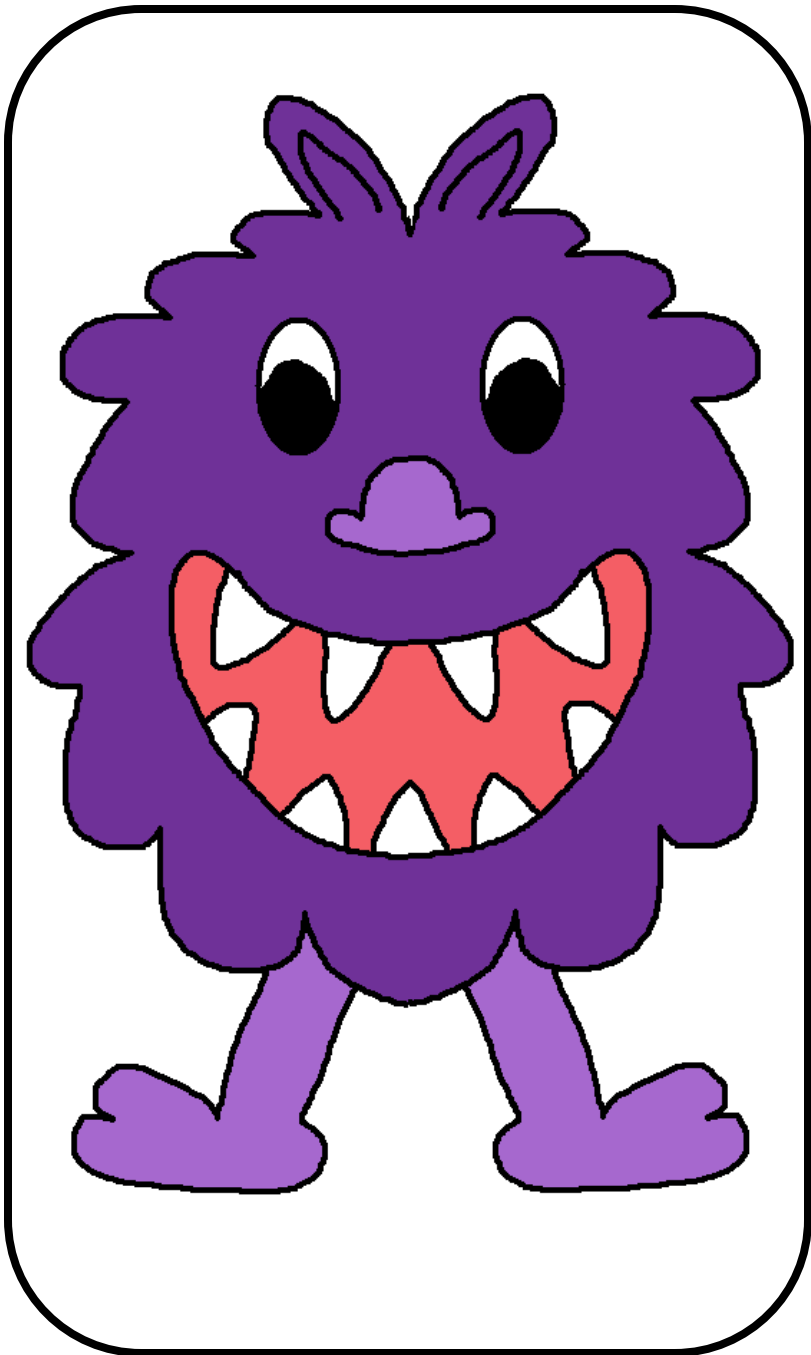

- Skill: recognizing, comparing and ordering numbers 1-30
- Vocabulary: big, bigger, small, smaller, more, less, high, low
- How to play: Place the monsters at either end of the number line (1-10, 1-20 or 1-30)
Say: *I'm thinking of a number between 1-10* (or whatever range you are using) The children take turns guessing the number. If their guess is too high, you say: *That number is too high*, and move the monster on the right to cover that number. If the number they guess is too low, you say: *That number is too low*, and move the monster on the left to cover that number. The children continue guessing until the right number has been guessed or "squeezed" between the two monsters. You may let the winner choose the next secret number and move the monsters according to the guesses.
