## Notes:

After the end of the Four Years War, Star Fleet Command examined all the classes of ships that fought in the conflict. They were impressed with how the Santee Class escort carrier preformed in battle. After the review of the after action reports of the class the admiralty discovered how well the captains of the ships adapted their vessels as a strike unit. The Captains would have accelerator canons removed from crippled ships mounted on the underside of the ships each with one missile apiece and they would send their light craft to distract the Klingon opponents then maneuver their ships into position to fire and then turn and run. The tactic caught the Klingons totally by surprise on most occasions.

So Star Fleet asked the engineers to build a class of ship based on current tecnogaly, and the result was the Jenshahn class Strike Carrier. Part Shuttle Carrier, part Cruiser, all lethal warship. The crews of this new class quickly improved on the tactics of the old Santees and continued to develop new tactics to support Marine operational landings.

The Jenshahn's main offensive weapon is its squadron of 14 fighters. They use the fighters to swarm the enemy target ship and then the vessel closes in to engage the swarmed ship with a combined phaser and torpedo attack.

The Jenshahn class was constructed at the Sol III and Sol IV shipyards at a combined rate of 5 per year. The Final production total was 15 ships.

I take no credit for the figures used on this vessel. Here is where the credits are due.
