From the first recorded contact with a kR'tRaein vessel on Stardate 2/2402, the Romulan Empire has yet been unable to establish any type of communication with the kR'tRaein race. The first contact seems to have occurred when a flight of three Romulan T-10 (Bright-One) Destroyers on Spinward Border patrol came into contact with a kR'tRaein scout craft. The Romulan squadron commander, perhaps with visions of glory or honor, uncloaked after initial scans and attacked. No trace has yet to be found of any of the three destroyers involved in that incident. Subsequent encounters with kR'tRaein vessels have been much more cautious in nature.

69828

The following is an excerpt from a report made by Subcommander Cr'Ane, commander of the Romulan Whitewind-class research cruiser T'SUNAMI, during the second encounter with a kR'tRaein vessel on Stardate 2/2404:

.....began sensor scans of an unknown vessel upon its discovery in this previously unexplored system. Initial scanning reveals their ship to be of an unrecorded configuration with the ship's internal life support made up of an extremely heavy mixture of known gases with the most abundant being oxygen, methane, hydrogen, and carbon. Also astonishingly, the alien ship's gravity registers at 2.9 G's (nearly three times Earth-normal! - JEH).

33265

Unidentified ship has begun scanning us despite our vessel being cloaked. Still has not armed weapons or powered any type of defensive shields.

At my order we have uncloaked and raised shields, though we have not powered weapons. The objections of my first officer Centurian Rh'Dona have been noted in my personnel log.

Continuous scanning for the past several minutes have revealed the following information: (see technical data sheet).

The computer has linked the design and construction make-up of the unknown vessel with that of a scout vessel observed two months ago.

Have discontinued sensor contact and are returning to our assigned research flight path. Alien vessel has stopped its scanning, last registered leaving this sector at Warp 12. Recalibration of the instruments have shown this to not be an error.....

The following two encounters between Romulan and kR'tRaein vessels provided little additional sensor information before the loss of the Romulan ships. These two losses, it should be noted, occurred only after the Romulans powered weapons.

Incredibly, the first of these losses was able to transmit the only available information on a kR'tRaein ships' armament and shields after surviving the first volley of fire. The kR'tRaein beam weapon was of a highly efficient phased laser type similar to Federation weaponry. The kR'tRaein shield system consists of an unidentifiable coating on its equally unidentifiable composite metal hull. The coating and very structure of the hull combine to absorb any energy striking the ship. The overload limit of this ability is

unknown at this time. The information on the kR'tRaein missile weapon is only hypothetical due to the destruction of the Romulan ship by this weapon ending any further information.

All scans of kR'tRaein vessels reveal the emission of high levels of Hawking radiation from their "Transwarp" engines. All other technical data regarding kR'tRaein science and capabilities is either inconclusive or unknown.

All scans also show the kR'tRaein's themselves only measure up to two meters tall with sensor scan variations indicating more than one type of race. No

communication has ever been intercepted from a kR'tRaein ship or from a kR'tRaein controlled system. Therefore the kR'tRaein means of communication and language are still as yet completely unknown.

Romulan records show the kR'tRaein's to only occupy a small area of five solar systems. kR'tRaein vessels do not show interest in expanding the kR'tRaein borders, rather they prevent utterly any attempts by vessels of other races to enter their small area of space.

Romulan, Klingon, and independent sources also indicate that Klingon advances towards kR'tRaein space have been equally futile.

KR'TRAEIN CLASS X (Approx.) SYSTEM DEFENSE SHIP Technical Data

The following is a hardcopy of a tachyonic transmission from the Romulan Historical Archives on R'Limam VIII.

Hull Data:

Superstructure Points - 65 est
Damage Chart - C
Size :

Length 270m
Width 160m
Height 70m
Weight 165,000mt

Landing Capability - None

Equipment Data:

Control Computer Type - Unknown
Transporters - Unknown

Other Data:

Crew - 710 est.
Shuttlecraft - Unknown

Engines and Power Data:

Total Power Units Available - 120-
140 estimated
Warp Engine Type - KRTWC-1
Number - 2
Power Units Available - 90-
100 estimated
Stress Charts - Unknown

Maximum Safe Cruising
Speed - Warp 15 estimated
Emergency Speed - Warp 17
estimated

Impulse Engine Type - KRIB-3

Power Units Available - 30-40
estimated

Weapons and Firing Data:

Beam Weapon Type - KRB-2A
Number - 2
Firing Arcs- port/fwd/stbd
Power Range - 25 estimated
Missile Weapon Type - KRM-7
Number - 4
Firing Arcs - 2 fwd, 2 aft
Damage - 20 estimated

Shields Data:

Deflector Shield Type - KRSN-1
Maximum Shield Power - 34
estimated (see report)

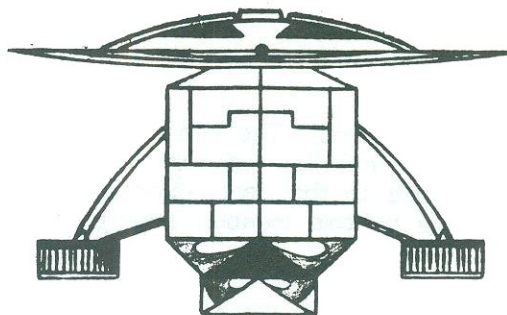

Combat Efficiency: Insufficient data to rate
