

A Compendium of Construction Facilities

by James Ap Wyvern

This article is intended to fill a gap in the available reference material. Numerous references are made to construction facilities without necessarily stating whether they are Starfleet Naval Yards or private contractors. Locations are likewise sometimes given rather loosely. The data for Romulan and Klingon facilities is by its very nature less than total. I may have missed some of the Starfleet yards, particularly those restricted to smaller craft. I have found no such arrangement of data elsewhere and it may prove useful to others. It is as accurate as possible at the time of writing. I have arranged it in several sections: The Federation, consisting of Starfleet Official Facilities and Private Contractors; Independents, consisting of those facilities on allied or neutral worlds; Klingon Facilities; and last, Romulan facilities. If this list seems unbalanced, please remember that forty percent of the Federation vessels are of Terran construction.

A number of well known names do not appear here as they are not prime hull contractors but subcontractors for specific items of equipment. Notable amongst these are Leeding Industries, warp drive contractors of considerable note, Timex Instrumentation, Tikla Sensors, Yo-Yo Dyne, Leeds and Northrop, Graf'Yay, Plasma Prime, and so forth. These will be the subject of a later writing.

Notes:

1. Klingon Facilities: In spite of the current treaty with the Imperial Klingon Empire the exchange of information is less than complete. Additionally, there are private builders working for family interests.
2. A considerable portion of the Klingon data is from Federation files of Operation Dixie.
3. Sources for the information on the Romulan Star Empire remain classified.
4. Recent information indicates that Cardasia has contracted to Romulan Yards for some design work.
5. The builders of ships for other races, Ferengi, Bejoran, Anassasi, et cetera are not the subject of this article and must be pursued elsewhere.
6. Some yards such as Anawalt have built ships but are primarily suppliers. Others, such as Blackpool Shipbreakers and Galway Maritime Salvage have constructed vessels from "parts on hand" but do not normally build vessels.
