

AMCAT CONDUCTION REQUIREMENTS

MINIMUM REQUIREMENTS – SERVER:

1. Freshly installed Windows 2000/XP professional. Kindly do not install any other software on it apart from the OS.
2. 512 MB of RAM or higher.
3. 1.7 GHz Processor or higher.
4. Server PC should have power back. Any power failure on the server is unacceptable.

Note: Though not necessary, we recommend a 2.5GHz (1GB RAM) machine and above for the server.

MINIMUM REQUIREMENTS - CLIENT:

1. System should have Windows98/2000/XP or Linux.
2. It should be Virus free.
3. 256 MB of RAM or more.
4. Very good connectivity with the Server.

GENERAL REQUIREMENTS:

1. LAN connectivity should be good and tested. Please try to have all PCs on a single LAN (not necessary).
2. The duration of the test is 140 minutes. We will need uninterrupted power supply during this period.
3. Following services should be turned off on all the systems that are assigned for the AMCAT event:
 - a. Proxy Settings.
 - b. Anti Virus and Windows Firewall.
 - c. MYSQL services.
 - d. Oracle services.
 - e. IIS Server/APACHE Server.
