

Ebola Awareness

Toolbox Talk

March 2014

Disclaimer: This awareness talk has been developed for educational purposes only. It is not a substitute for professional medical advice. Should you have questions or concerns about any topic described here, please consult your medical professional.

EBOLA

WHAT IS IT?

Ebola is caused by a virus.

- Causes a severe illness, with bleeding
- Up to 90% will die
- No vaccine, and no treatment are available
- Many people can quickly become infected

EBOLA

HOW DOES IT SPREAD?

Sick people can spread this disease to others

- People in direct contact with sick people are at highest risk:
 - Family members
 - Healthcare workers

Dead bodies can also spread the disease. **BE CAREFUL**

- DO NOT wash, touch or kiss dead bodies
- DO NOT wash hands in the same bucket as other who have touched the body

(mostly from nose and mouth)

EBOLA

WHAT TO DO

Go to your medical centre and
tell them about your illness

Follow the advice. You may
be sent to a special hospital

Stay away from others so
they don't get sick

Be especially careful of your
stomach and diarrhoea
